Exercise: Markdown

Environmental Data Analytics | John Fay and Luana Lima

Contents

List of Tables

Set up the coding environment

Wrangle the data

```r
#Subset columns and rows
nutrient_data <- nutrient_data_raw %>%
  select(-c(lakeid,depth_id,comments)) %>%
  filter(depth == 0) %>%
  drop_na()

#Compute summary stats for total nitrogen
nutrient_data_tn <- nutrient_data %>%
  group_by(lakename) %>%
  summarize(
    mean_tn_ug = mean(tn_ug),
    min_tn_ug = min(tn_ug),
    max_tn_ug = max(tn_ug),
    sd_tn_ug = sd(tn_ug)
  )
```

The nutrient data has 157 rows and 11 columns

Report the summary

```
# want to show summary data as formatted table using kable
knitr::kable(nutrient_data_tn,
             col.names = c("Lake Name", "Mean", "Min", "Max", "Standard Deviation"),
             caption = "Summary of Total Nitrogen")
```

Table 1: Summary of Total Nitrogen

Lake Name	Mean	Min	Max	Standard Deviation
Paul Lake	368.7564	45.67	628.625	106.3474
Peter Lake	561.8752	219.72	2048.151	305.6491
